

All Inclusive® Water/Wastewater Solutions, Inc.

When Soil Percolation Reports Are Necessary

A Soils Percolation Report can be prepared to determine the square footage required for effluent disposal. Six percolation test areas shall be excavated, together with two six foot deep trenches to determine mantle classification and depth to groundwater.

Six percolation tests shall be orchestrated according to the requirements of the RWQCB. The Soils Report shall be included in the Report of Waste Discharge and Form 200 application submittal to the RWQCB.

The backhoe excavations using a two foot wide bucket shall be provided by the site owners.
